

# ClickTime Single Sign-On (SSO) Options

SSO allows your team to log into multiple applications with a single authentication

# Single Sign-On Options

ClickTime is partnered with several leading organizations to simplify logging in

Please select a Single Sign-On (SSO) method:

Google Apps

Azure AD

Okta™

OneLogin

## Save Time and Effort

We know that your company uses a multitude of applications and services, with each requiring its own login and password. ClickTime wants to simplify things for you and your employees. With SSO, you can access all of your applications - Google, your calendar, ClickTime - by authenticating just once, using a single login

1

### One Password to Rule Them All

Imagine signing into one location, accessing your list app, your email app, or your ClickTime app, without needing to remember a different password for each. We understand that many employees struggle to remember and manage the variety of passwords that come with different services, so with SSO, there's only one combination they have to remember. No more wasting your time remembering unnecessary logins and passwords.

2

### Secure Your Company's Information

With SSO, all of your logins occur on one screen, which will help your employees identify phishing attacks and prevent possible transfers of sensitive information

3

### Adapt Quickly

With SSO, you have more security at your fingertips, from dedicated SSO providers according to their methods. Being able to access more security options than standard email/password gives you more options to your company, as well as more assurance that you can adapt readily to upcoming standards in authentication

4

### Ease of Use

ClickTime has partnered with companies like OneLogin and Okta to manage the migration process for existing ClickTime customers. We also support SAML, which allows for more freedom of choice, allowing enterprises to choose their vendors, knowing that the standards ensure interoperability across identify providers.
